

Java Assignment: Book Search Using ArrayList

Aritra Talukdar

February 14, 2026

Objective

To create a Java program using ArrayList to store book titles and search for books containing a given word.

Description

The program stores book titles in an ArrayList. A search keyword is taken from the user and all book titles containing the keyword are displayed.

Source Code

```
import java.util.ArrayList;
import java.util.Scanner;

public class BookSearch {
    public static void main(String[] args) {

        ArrayList<String> books = new ArrayList<>();

        books.add("Introduction to Java");
        books.add("Data Structures in Java");
        books.add("Operating System Concepts");
        books.add("Database Management Systems");
        books.add("Computer Networks");

        Scanner sc = new Scanner(System.in);
        System.out.print("Enter a word to search: ");
        String keyword = sc.nextLine().toLowerCase();

        System.out.println("\nBooks containing the word \" " +
            keyword + "\" :");
        for (String book : books) {
```

```

        if (book.toLowerCase().contains(keyword)) {
            System.out.println(book);
        }
    }

    sc.close();
}
}

```

Output Screenshot

The following screenshot shows the output of the program execution.

Conclusion

This assignment demonstrates the use of ArrayList in Java and string searching using the contains() method.
