

Python Assignment: Product Stock Management

Aritra Talukdar

February 14, 2026

Objective

The objective of this assignment is to create a Python program using a list and dictionary to store product information and display products whose stock quantity is less than 10.

Description

Each product is represented as a dictionary containing the product name and stock quantity. All products are stored inside a list. The program checks and displays products with low stock.

Source Code

```
products = [  
    {"name": "Pen", "stock": 15},  
    {"name": "Notebook", "stock": 5},  
    {"name": "Pencil", "stock": 8},  
    {"name": "Eraser", "stock": 20},  
    {"name": "Marker", "stock": 3}  
]  
  
print("Products with stock less than 10:")  
for product in products:  
    if product["stock"] < 10:  
        print(f"{product['name']} - Stock: {product['stock']}")
```

Output Screenshot

The following screenshot shows the output of the Python program after execution.

```
[Running] python -u "c:\\Users\\HP LEPTOP\\OneDrive\\Desktop\\Advanced prog\\Assignment 2\\prog.py"
Products with stock less than 10:
Notebook - Stock: 5
Pencil - Stock: 8
Marker - Stock: 3

[Done] exited with code=0 in 0.193 seconds
```

Conclusion

This assignment demonstrates the effective use of Python lists and dictionaries for storing and filtering structured data.
